Geologic Reservoir Data Issues

- Gaps, Uncertainties, Errors & Inaccuracies
- Representativeness & Information Content
- Differences in spatiotemporal support scales of data & features/processes
- Heterogeneity (faults, facies, layers, synclinals, vents, volcanos, …)
- “Hidden” (latent) features/signatures

GeoML: Methods/Software for geospatial ML analyses

- Multi-step physics and geology aware ML algorithms
- Automated cross-validations and fine tuning
- Identifying the best approach for a given dataset/problem
- Geospatial benchmarks
- ML techniques (standardized APIs):
  - Nonnegative matrix/tensor factorization (NMFk/NTFk)
  - Support Vectors (SVM/SVR)
  - XGBoost/EvoTrees
  - Inverse Distance Weighted (IDW)
  - Spatial splines/Minimum curvature (Biggs FD and classical)
  - Kriging/Vecchia/Gaussian Process/Nearest Neighbour Gaussian Process
  - Kriging Convolutional Neural Networks (KCN)
  - Gaussian Markov Random Field (GMRF)
  - GNNs, MLPs, CNNs, LSTMs
  - Stochastic PDEs (SPDE)
  - Diffusion Model (DM)
  - Physics models (analytical/numerical)

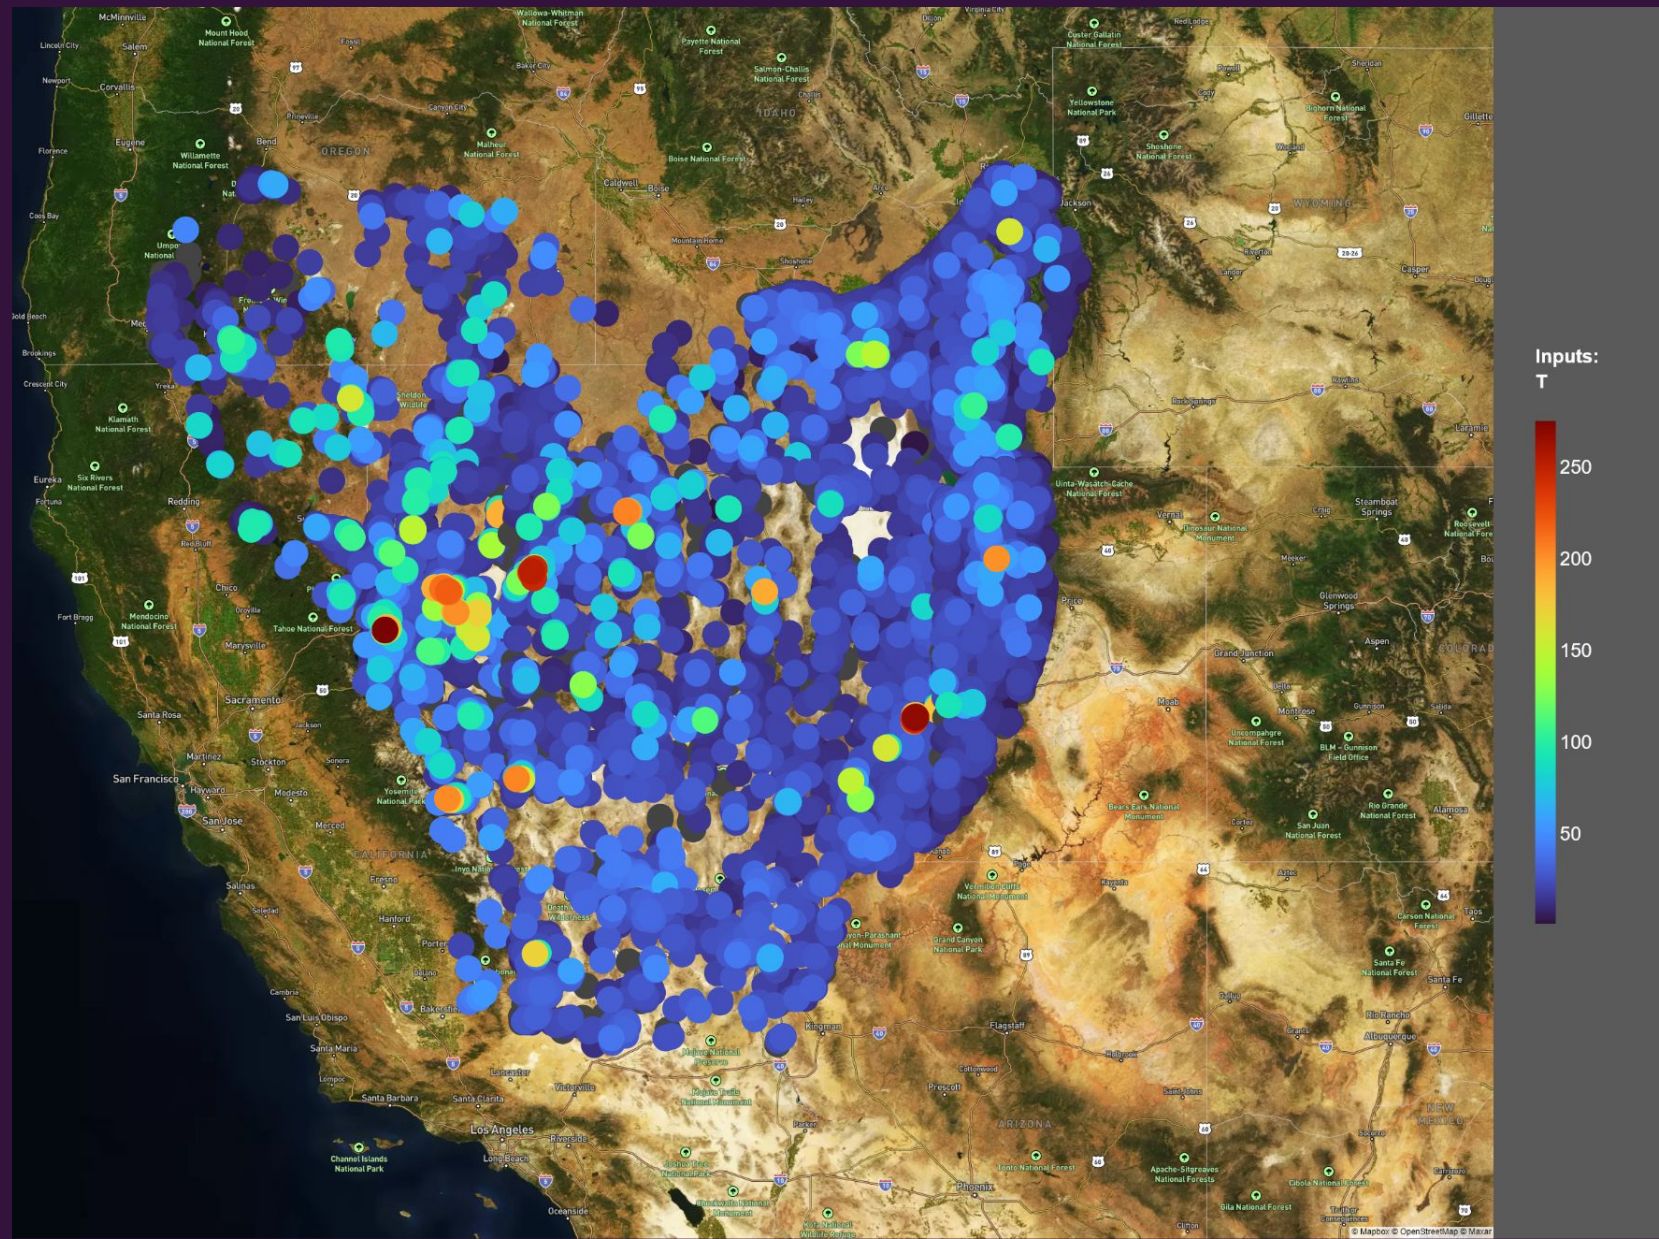
Great Basin Datasets

- Geology
- Geochemistry
- Geophysics (including GeoDAWN)

- 126 data attributes in total



envitrace

Great Basin Datasets (126 attributes in total)

- Magnetics
- Radiometry
- Gravity
- Li, Mg, Na, Fe, HCO3, SiO2, Ba, F, SO4, K, B, Ca, Cl, As, …
- Heat flow
- Favorable Geothermal Structural Settings (INGENIOUS project)
- Quaternary Faults
- Well & Spring Chemistry
- Principal Aquifers

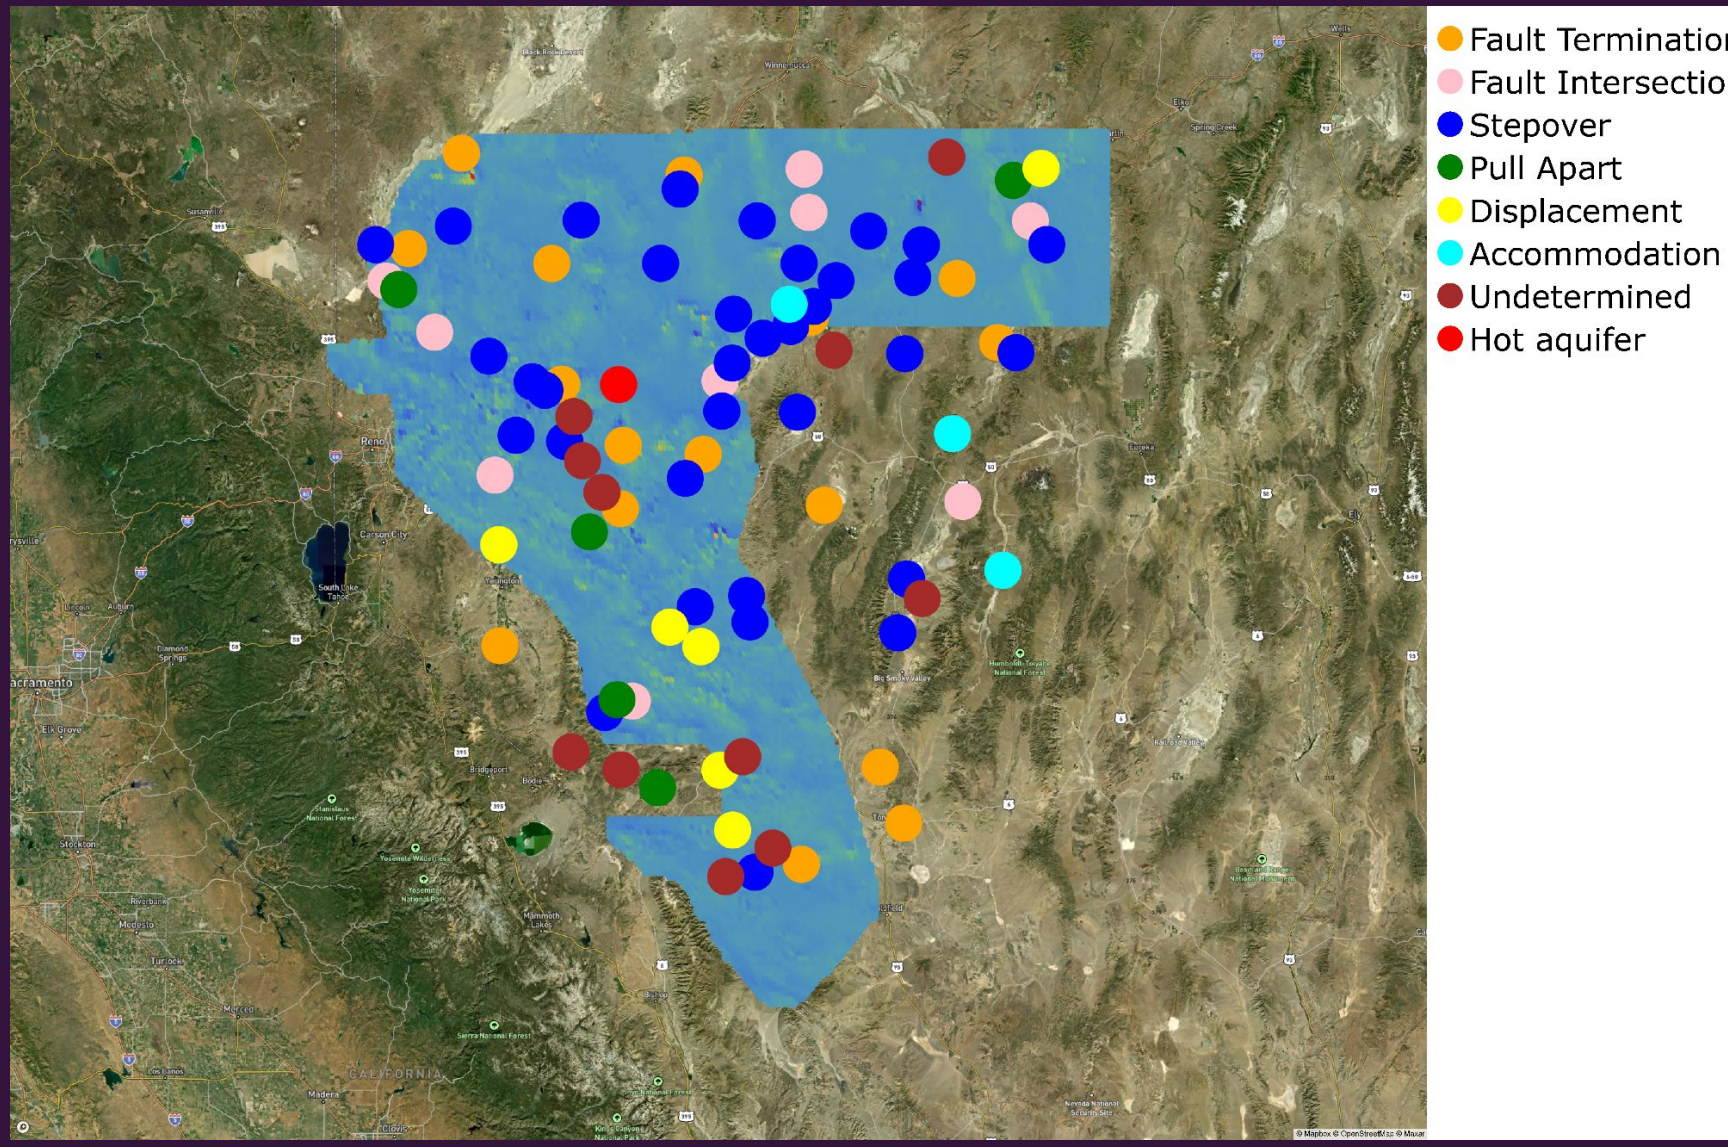
Geologic structures in the GeoDAWN region



GeoDAWN ML results:

- A: Pull apart / Fault Termination
- B: Displacement
- C: Stepover
- D: Fault Intersection / Undetermined
- E: Accomodation
- F: Fault Termination

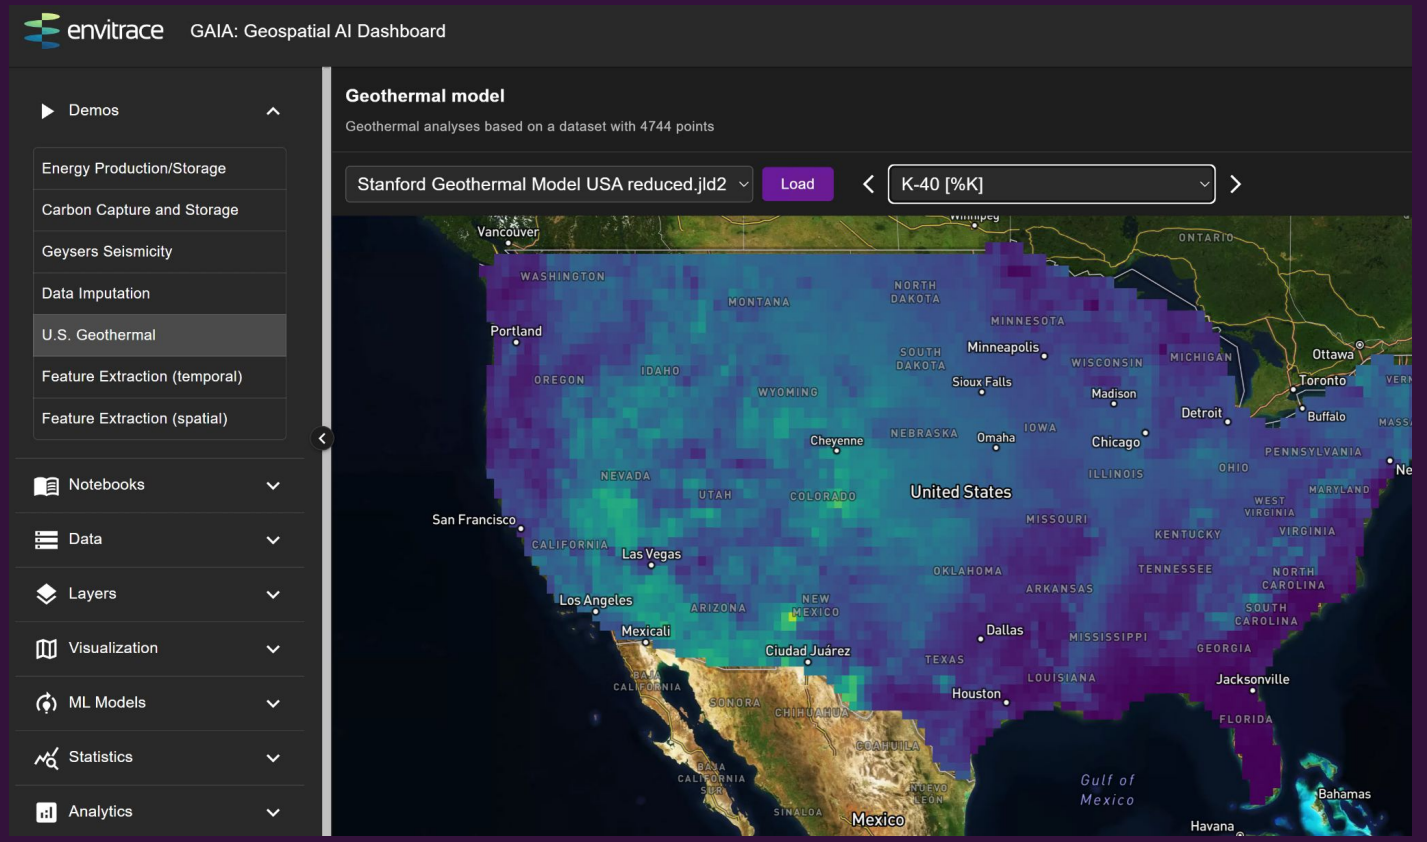
Our SaaS

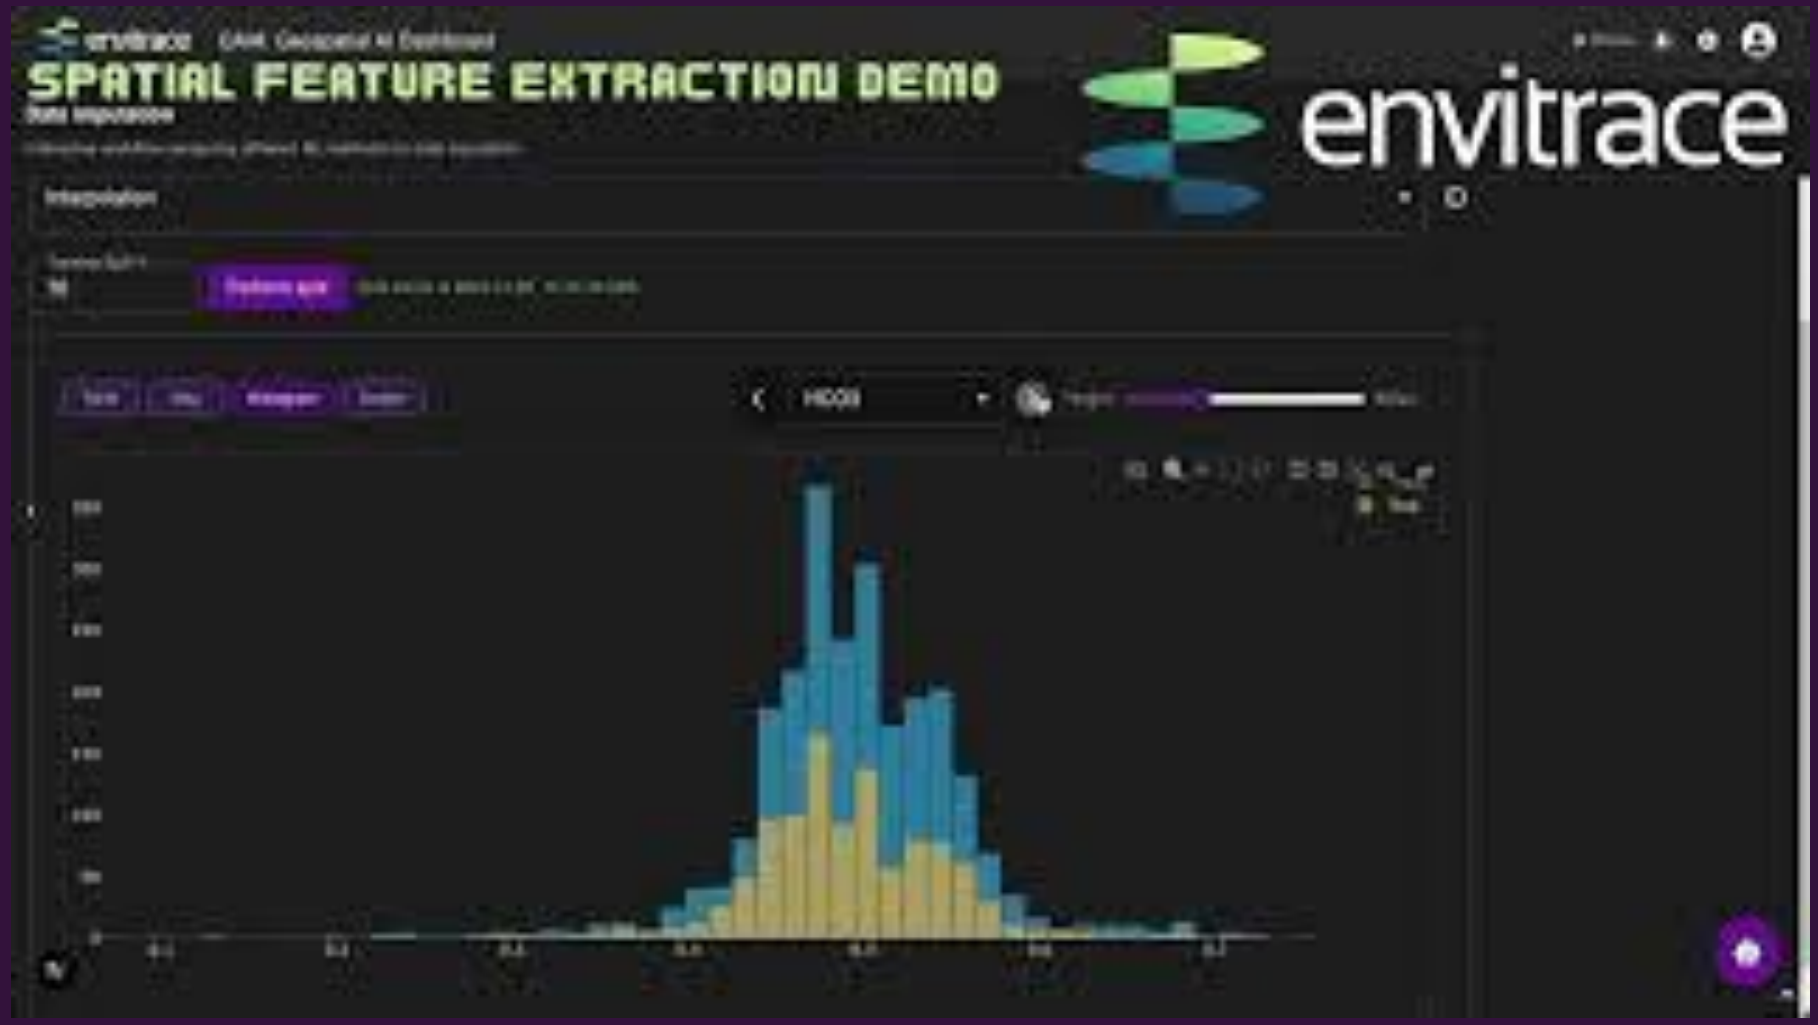
AI/ML cloud product for geo spatio-temporal analyses

- Public and proprietary data
- Various supervised, unsupervised, and physics-informed ML methods
- Accounting for physics and geology
- Accounting for data gaps and measurement errors
- Extraction of hidden geologic features
- Estimation of prospectivity and productivity

http://envitrace.com/saas



Spatial Feature Extraction



Conclusions

info@envitrace.com, http://envitrace.com

- Our AI workflows allow for efficient, fast and robust data assimilation
- Exploration of ML alternatives
- Benchmarking
- Extracts features
- Imputes data
- Evaluates prospectivities
- SaaS dashboard: http://envitrace.com/saas
